## Interactive sonification of images for the visually impaired

Paweł Strumiłło, Andrzej Radecki, Piotr Skulimowski, Michał Bujacz

*Marek Obuchowicz, Izabela Borowiecka, Mateusz Holak*

**Objective:** to develop and verify different algorithms of interactive sonification of displayed images and explored by the visually impaired by touch

**Methods:** mapping of HSV colour space into appropriate sonic space

**Results:** the proposed method allows the blind-folded users to interpret shapes and differentiate colours in images, the research has determined algorithms that allow for quick and correct interpretation of images explored by touch
