

Acoustic Data Building Toolset for Easy Experimentation with Neural Network-based Speech Recognition in Polish and English

J. Sas, Wrocław University of Science and Technology, Faculty of Computer Science and Management

- Work motivation - why raw recordings and not sufficient to experiment with DNN in ASR
- Acoustic dataset information structure
- Acoustic dataset preparation pipeline - from speech samples to loadable tensors
- Tools for dataset manipulation and creation from scratch
- Examples of DNN experiments based on CLARIN_PHONEREC
