<sup>2</sup> Poznan University of Medical Science, Department of Palliative Medicine

- Evaluation of human – robot - interaction (HRI) related to the future use of a humanoid robotic system as a tool supporting the care for an independently living elderly person with MCI.
- Experiences from validation with 5 older people in their own homes during 10 weeks of trials.
- Detailed results covering user acceptance and scores regarding perception of the tested system were measured using The Godspeed and the Almere questionnaire.

Assistive robot Tiago used in trials
